File Format for Data Imports

Please export the CSV file in UTF-8 or ASCII file encoding. Proper escaping must be used (ie, fields containing a quote should be properly escaped)

Fields	R	V	Notes
<i>unique_id</i>	x*		An identifier unique *per row*, not per file_number/account.
<i>file_number</i>	x		This is your identifier for the account. Could be file number, or database ID
<i>file_number_other</i>			Alternative ID a user may use to find their record.
<i>balance</i>	x		Account balance. Must be a decimal without \$ signs. IE 100.0, or 200.05
<i>creditor_name</i>	x		Name of the creditor. You can also send us a separate creditors file.
<i>creditor_id</i>	x		ID of the creditor. Must be unique to a creditor.
<i>ssn_last_four</i>	x*	x	The last four of the social security number - Please *do not* provide the full SSN.
<i>first_name</i>	x	x	First name of debtor
<i>last_name</i>	x	x	Last name of debtor
<i>full_name</i>		x	May use this instead of first and last name fields.
<i>dob</i>		x	Date of birth.
<i>street</i>		x	Debtor's street
<i>street2</i>		x	Debtor's secondary street
<i>city</i>		x	Debtor's city
<i>state</i>		x	Debtor's state
<i>zip</i>		x	Debtor's zip
<i>address</i>		x	Full Debtor address. May use instead of the above fields.
<i>phone</i>		x	Debtor's Phone
<i>drivers_license</i>		x	Debtor's driver's license number
<i>plan_code</i>			Your plan code. Can associate plan codes with behavior. HealPay plans get marked with a HealPay plan code
<i>plan_start_date</i>			When the plan starts
<i>plan_period</i>			Monthly, bimonthly (twice a month), fortnightly (every 2 weeks), weekly, daily
<i>plan_amount</i>			Total payment amount of the plan
<i>plan_payment_amount</i>			Installment payment amount on the plan
<i>plan_first_payment_amount</i>			The first payment owed on the plan
<i>plan_last_payment_amount</i>			The last payment owed on the plan
<i>plan_payment_count</i>			Number of payments on the plan
<i>interest_rate</i>			Rate at which interest accrues. Should be provided as a decimal percent, e.g. 6.00 for 6%
<i>trust_account</i>			If there are multiple trust accounts to which payments are routed, must include some identifier per account.
<i>status_code</i>			Status codes may be used to handle accounts in particular ways (e.g., offering payment plans or disabling payments)
<i>placement_date</i>			Date the account was received
<i>attorney</i>			ID for attorney associated with account
<i>treatment</i>			Can match the name of a treatment configured in our system to change handling of an account (e.g. hiding balance info)

R - This indicates a required field.

V - This indicates a field that we use to verify the user when they access an account.

* Many CRMs have the ability for merchants to associate multiple entities with the same file number. Some merchants have multiple debtors or consumers for the same file number, i.e., Person A and Person B are both on the same court case and are paying individual monthly installments against the same case. There are also merchants that enter the creditor as another row for the same file number. If your system allows for cases like this, we require either a unique row identifier that will only ever belong to that row (and does not get reassigned if the record gets deleted) or at a minimum the *ssn_last_four*.

Please filter out unneeded rows when possible. For example, if your system associates the creditor as a second account record row, please filter out the creditor during export. The exception to this are rows for a debtor that have been updated to indicate a zero balance after having been paid off. We require these to understand when to clear accounts from our system.

Please filter out critically sensitive information. While we obviously need to have certain types of personally identifying information, things like ***full*** social security numbers and credit cards should be redacted.
